

Gabriel Koerich | Software Engineer

Summary

Senior software engineer and entrepreneur with 15+ years of professional experience, coding since age 13. Founded Bulldesk (acquired 2021), a Marketing Automation + CRM platform. Currently architecting Solana DeFi at Lulo; also focused on AI / agent orchestration (Claude Code, Codex, OpenCode in production workflows). BBA in Finance.

Core Competencies

AI & Agent Orchestration: Claude Code, Codex, OpenCode in daily production use. Multi-agent orchestration ([orch](#)), automating engineering workflows, prompt engineering. Available for [consulting](#).

Blockchain: Solana (Rust, Anchor), EVM (Solidity, Foundry, Hardhat), DeFi integrations, security-first design, onchain/off-chain indexing, comprehensive testing (unit, fuzz, integration)

Full-Stack: Rust, Python, Node.js/TypeScript, Laravel, Vue.js, React

Infrastructure: MySQL, PostgreSQL, Redis, Docker, CI/CD, GitHub Actions, Terraform, AWS, GCP

Professional Experience

Senior Software Engineer, Lulo (Nov 2022 - Present)

Smart contract development for the DeFi protocol. Designed dual-pool architecture: a security pool protecting users against protocol hacks while generating yields, and a higher-yield pool with standard DeFi risk exposure.

- Architected protocol + CPI integrations with major Solana protocols
- Built SDKs, CLIs, and comprehensive test suites (Rust unit + Anchor integration)
- Developed EVM protocol integrations using Solidity and Forge

Stack: Rust, Solana, Anchor, TypeScript, GitHub Actions, GCP

Solana Smart Contract Engineer, Freelance (Oct 2021 - Nov 2022)

Built multiple Solana projects: NFT marketplace with custom auctions, price prediction game with on-chain oracles, and DeFi contracts using Orca Whirlpool. All with comprehensive testing, modular architecture, and JS SDKs.

Stack: Rust, Solana, Anchor, TypeScript

Senior Software Engineer, Covie (Apr 2021 - Dec 2021)

Built integrations with insurance companies, processing high-volume policy data and claims workflows.

Stack: Symfony, Node, PostgreSQL

Founder, Bulldesk (Sep 2015 - May 2021)

Founded and scaled Brazil's first combined Marketing Automation + CRM platform. Built core architecture, led a team of 4 developers, managed infrastructure, and ran product development and company finances. Acquired in 2021.

- Scale: 80M+ monthly user requests, 500M+ monthly background jobs
- Multi-server architecture with load balancers, MySQL replication, Redis queues
- Complex automation engine processing 1M+ leads through multi-step campaigns

Stack: Laravel, Node, MySQL, Vue.js, Redis, AWS

Founder / Full Stack Engineer, Algorit (Jun 2013 - Sep 2016)

Digital agency and software house. Responsible for all software development and business operations.

Education

- **BBA Finance:** Universidade do Sul de Santa Catarina
- **English Language Studies:** LSI, London

Languages: Portuguese (native), English (fluent)
