

Gabriel Koerich | Software Engineer

Summary

Senior software engineer with 15+ years building production systems, coding since age 13. Currently architecting Solana DeFi at Lulo. Previously founded and sold Bulldesk, a marketing automation SaaS acquired in 2021. BBA in Finance.

I work across backend, blockchain (Rust/Solana, EVM/Solidity) and AI tooling. I run Claude Code, Codex and OpenCode in parallel every day with orch, and help companies do the same.

Open to: Senior/Staff roles in AI infrastructure, DeFi or fintech, and AI consulting.

Core Competencies

AI & Agent Orchestration

- Claude Code, Codex and OpenCode in daily production work
- Multi-agent orchestration for planning, implementation and review with orch
- Workflow automation: code generation, refactoring, reviews, docs and ops

Blockchain Engineering

- Solana smart contracts (Rust, Anchor) and EVM (Solidity, Hardhat, Foundry)
- DeFi integrations: CPI, composability, onchain and off-chain indexing
- Security-first design, unit, fuzz, property and integration tests

Backend & Infrastructure

- Languages: Rust, Python, TypeScript, PHP (Laravel), Vue.js, React
- Data: MySQL (replication, tuning), PostgreSQL, Redis, Beanstalkd, Pub/Sub
- Ops: Docker, GitHub Actions, Terraform, Ansible, AWS, GCP, Fly.io, Datadog, Sentry

Professional Experience

Senior Software Engineer, Lulo

November 2022 - Present

Smart contract development for the DeFi protocol. Designed a security pool that protects users against protocol hacks while earning yield, and a higher-yield pool with standard DeFi risk.

- Architected the protocol and its CPI integrations with major Solana protocols
- Built the SDKs and CLIs for protocol interaction
- Unit tests in Rust and integration tests in Anchor
- EVM protocol integrations with Solidity, Forge and Hardhat

Stack: Rust, Solana, Anchor, TypeScript, GitHub Actions, GCP

Solana Smart Contract Engineer, Freelance

October 2021 - November 2022

- NFT marketplace with custom auction mechanisms
- Price prediction game with an onchain oracle
- DeFi contract using Orca Whirlpools for liquidity

Each shipped with tests, TypeScript/Rust SDKs and CLI tooling.

Stack: Rust, Solana, Anchor, TypeScript, GitHub Actions

Senior Software Engineer, Covie

April 2021 - December 2021

Built integrations with insurance companies, processing high-volume policy data and claims workflows.

Stack: Symfony, Node, PostgreSQL, REST APIs

Founder, Bulldesk

September 2015 - May 2021

Founded and scaled the first Brazilian platform to combine marketing automation and CRM. Exited via acquisition in 2021.

- Built the core architecture and most features, led a team of 4 developers
- Ran infrastructure and DevOps, plus product, business and finance
- 80M+ requests and 500M+ background jobs per month
- Multi-server setup with load balancers and dedicated worker servers
- Automation engine processing 1M+ leads with 5 to 10 concurrent actions each
- MySQL replication, Redis and Beanstalkd queues, real-time updates over WebSockets

Stack: Laravel, Node, MySQL, Vue.js, Beanstalkd, Redis, Stripe, AWS

Founder, Algorit

June 2013 - September 2016

Digital agency and software house building custom web applications. Ran software development, business and finance.

Stack: Laravel, Node, TypeScript, Python, MySQL, Vue.js

Education

- **BBA Finance:** Universidade do Sul de Santa Catarina
- **English Language Studies:** LSI (London)

Languages

- **Portuguese:** Native
- **English:** Fluent (professional working proficiency)
